Summary

Senior Full Stack Engineer with 10+ years of experience building large-scale React and Node.js platforms across healthcare, enterprise SaaS, and infrastructure technology. Specialized in modern frontend architecture, API-driven systems, and event-based backend services supporting high-traffic, regulated environments. Proven ability to modernize legacy systems, improve performance, and scale products used by millions of users. Strong background delivering secure, compliant solutions while collaborating closely with product, design, and operations teams.

Skills

- **Frontend development**
React, Next.js, React Native, Vue, Nuxt, Shopify, TypeScript, JavaScript, Tailwind CSS, Chakra UI
- **Backend development**
Node (Express, Nest), Golang, Java (Spring Boot, Hibernate, Spring Security), Python (Fastapi, Django, Flask), Ruby on Rails, C#, Restful APIs, GraphQL, Authentication (JWT, OAuth, SSO)
- **Database management**
PostgreSQL, MySQL, Microsoft SQL, MongoDB, AWS DynamoDB, Database design, Query optimization
- **Event-Driven Architecture & Messaging**
Kafka, RabbitMQ, WebSockets, gRPC, Pub/Sub patterns
- **DevOps & Cloud Engineering**
Docker, Kubernetes, Terraform, CI/CD (Jenkins, Circle CI, Travis CI, Github Actions), AWS, Azure, Firebase, Supabase
- **Testing, Code Quality & Security**
Jest, Cypress, Pytest, Mocha, SonarQube, Snyk, OWASP Top 10
- **AI & Machine Learning**
Python ML libraries (TensorFlow, scikit-learn, PyTorch), NLP, OpenAI API (GPT, Codex), Data preprocessing, AI-powered chatbot development
- **Industry**
Healthcare Systems, HIPAA, FHIR, HL7, EHR, Clinical Workflows, PHI/PII Security Financial Services,

Experience

CVS Health | Senior Software Engineer | Remote

01/2022 – 03/2026

- Drove development of a unified digital health platform integrating pharmacy, insurance, and care services using React, Next.js, and Node.js, serving over 15 million registered members nationwide.
- Architected high-traffic React and Next.js user interfaces for prescription management and appointment scheduling, cutting average page load times by 31% across core member journeys.
- Engineered scalable Node.js microservices and API gateways supporting prescription fulfillment, eligibility verification, and member identity workflows, improving backend response times by 29% under peak load.

- Deployed event-driven backend pipelines with Kafka to process real-time prescription, notification, and workflow events, achieving 99.9% message delivery reliability across distributed systems.
- Rebuilt monolithic frontend codebases into modular React component libraries, reducing production defects by 26% and accelerating feature delivery across multiple teams.
- Enhanced system scalability through targeted frontend caching and backend concurrency improvements, increasing sustained concurrent user capacity by 34% during high-demand seasonal periods.
- Streamlined build, test, and release pipelines with Docker, Kubernetes, and Terraform, reducing deployment lead time by 78% while improving overall release stability.
- Established secure data access patterns, audit logging, and encrypted service communication to meet HIPAA requirements for patient and member data platforms.
- Directed technical execution through architectural reviews, code quality standards, and hands-on mentorship, increasing team delivery velocity by 21% over multiple release cycles.

Dignity Health | Senior Software Engineer

08/2018 – 12/ 2021

- Led redevelopment of patient-facing and internal healthcare platforms using React and Node.js, supporting pharmacy, retail, and clinical workflows across hospitals serving millions of patients annually.
- Architected scalable Node.js APIs integrating EHR, prescription, and retail systems, increasing transaction throughput by 36% during peak seasonal and pandemic-driven demand.
- Introduced event-driven processing pipelines with Kafka and RabbitMQ to synchronize prescriptions, orders, and patient interactions, reducing cross-system data inconsistencies by 33%.
- Modernized legacy UI layers with contemporary React architecture, cutting average user interaction latency by 28% across high-traffic patient and retail portals.
- Tuned database queries and service contracts across PostgreSQL and SQL Server environments, improving response times by 35% for critical clinical and pharmacy endpoints.
- Standardized automated testing and release pipelines, lowering production incidents by 42% while increasing deployment frequency and reliability.
- Applied HIPAA-aligned access controls, auditing mechanisms, and data protection practices for applications handling sensitive patient and clinical information.

Meter | Backend Engineer

06/2015 – 07/ 2018

- Built core Node.js backend services for Meter's cloud-managed networking platform, supporting secure provisioning and management of over 2,000 network devices across early enterprise deployments.
- Designed RESTful APIs enabling reliable communication between custom hardware, control-plane services, and internal dashboards, reducing average device onboarding time by 38%.
- Developed real-time telemetry and event-processing pipelines using Kafka, ingesting millions of network events per day while improving observability and troubleshooting efficiency by 41%.
- Engineered authentication, authorization, and configuration validation services, reducing misconfiguration-related outages by 32% across pilot and early production environments.
- Operated backend services on AWS using Terraform and containerized workflows, sustaining 99.9% uptime during continuous feature delivery and customer expansion.

Education

Cal Poly San Luis Obispo

Bachelor's Degree – Computer Science | 05/2015 | Cumulative GPA: 3.63
